

MyAI Vault

AI-Powered Digital Identity System

Thought Process Sheet

Problem Statement

Students and professionals accumulate certificates, resumes, project reports, internship letters, portfolios, and achievements across multiple platforms. Traditional storage systems only save files and do not understand or connect them, making retrieval difficult.

Why This Problem Matters

Scattered records make it hard to prepare for internships, jobs, higher education, and portfolios. An intelligent system can organize, connect, and instantly retrieve important information.

Proposed Solution

MyAI Vault uses AI to analyze uploaded documents, automatically categorize them, extract skills and achievements, build relationships among records, and provide natural-language search with a digital journey timeline.

AI Technologies Used

Google Gemini AI, Natural Language Processing, Semantic Search, Knowledge Relationship Mapping, React + Vite, Node.js + Express, TypeScript, Render.

System Workflow

Login → Upload Documents → AI Analysis → Skill & Metadata Extraction → Intelligent Categorization → Relationship Mapping → Digital Journey Timeline → Semantic Search → Dashboard.

Key Features

- Secure authentication
- AI document categorization
- Skill extraction
- Knowledge graph
- Semantic search
- AI chat assistant

- Responsive dashboard

Future Improvements

Vector databases, RAG, OCR support, multilingual processing, AI resume builder, interview assistant, career recommendations, mobile application, blockchain certificate verification.

Conclusion

MyAI Vault transforms fragmented academic and professional records into an intelligent digital identity that understands, organizes, and retrieves information efficiently.

The screenshot shows the 'Digital Identity System' login page of the MyAI Vault. The page features a dark blue theme with a sidebar navigation menu on the left. The main content area displays a login form with the following elements:

- Sign In / Create Account / Forgot Password:** A row of three buttons for user authentication.
- Continue with Google Student Account:** A button for social login.
- OR CREDENTIALS LOGIN:** A section for traditional login.
- Student / Professional Email:** A text input field with the email 'alex.morgan@stanford.edu' entered.
- Password:** A password input field with a 'Forgot?' link.
- Keep me signed in:** A checkbox for session persistence.

The sidebar navigation menu includes options like AI Memory System for Students, Your Journey. Understood by AI., Automated OCR & Skills Indexing, Interactive Knowledge Graph, and ATS Resume Scoring & Insights. The top navigation bar includes a Back to Landing Page button.
